IS THIS ARTICLE PEER REVIEWED?
Let's say I'm looking at a reference list, and find an article that looks interesting.

The first step is to look for the name of the journal. This one is in the *Journal of Personality and Social Psychology*. 
You can use a tool called Ulrichs Web to find out whether this is a peer-reviewed journal.

From the library website, click on Databases A-Z.
From the A-Z list, click on the letter U.
Ulrichs Web

Access: Current NU plus alumni

MORE INFO

Find Ulrichs Web in the list.
Enter the **journal title** into the search box. Use quotation marks around the title to help limit your results.
You may see multiple listings for the print and digital versions of the journal. Look to the left of the title for the referee shirt symbol.
The referee shirt icon is the symbol for refereed. Refereed means the journal has been peer reviewed. It means the journal is scholarly.

If you don't see the shirt, the journal is not peer reviewed. If you do see the shirt, the journal is peer reviewed.

We can see the symbol next to the Journal of Personality and Social Psychology. Therefore, this journal is peer reviewed.
However, keep in mind that not everything published in a peer-reviewed journal is a peer-reviewed article.

Academic journals publish editorials, book reviews, commentaries and other short pieces.
If you are unsure, do one last visual check.

The full-text of articles will often include labels or cues that identify the text type.

Current medical research funding and frameworks are insufficient to address the health risks of global environmental change

Authors: Kristie L. Ebi, Jan C. Semenza, Joacim Rocklöv

Open Access: Commentary

First Online: 11 November 2016

Also, check the page length—if an article is a few pages or less, it is most likely not a peer-reviewed article.
