To find the full text of articles using Scholar OneSearch, you'll first need to enter your search terms in the Scholar OneSearch box on the library website.
Then, look to the left side of your results and limit to articles, under the material type heading.

If you need articles from peer-reviewed journals, you can also use the peer-reviewed journal filter on the left side of your search results.
Once you’ve limited your results to articles, you can look through your results for articles of interest.

You'll usually see two options to access the full text.

The first option is to look for the Full Text available link listed below the article’s publication information.
A window will open, revealing one or more links to library databases or journals that provide the full text of the article you want.

Click any of the links in the list to be directed to the full text of the article.
Climate change

Negotiations in Durban over greenhouse-gas emissions should not try to revive Kyoto.

Look for links to download the PDF or read the article in your browser. The PDF download options may be located in different places in different databases.
The second way to access full text is to click the View Issue Contents in BrowZine link.
When you click on this link, you’ll be directed to BrowZine, which displays the issue of the journal that contained the particular article you were interested in.

To access the full text, just click on the Read Full Text icon.
Sometimes, instead of seeing full text available, you might see Check for full-text listed under the article. This means that we may not have this particular article available in full text.
Order from ILLiad

However, if you click on the check for full-text link, you’ll see an option to order the article via ILLiad, which is our interlibrary loan service.
Order from ILLiad

Just click the link to log in to your ILLiad account with your MyNortheastern username and password and fill out the request form.

It typically takes 1-2 business days to fill these requests.
